Perception of Parental Disapproval-Grade

Perceived parental disapproval is an important factor in whether or not children use substances. Research indicates that “youths who perceive that their parents and other adults disapprove of substance use and who report that their parents are involved in their day-to-day activities [helped with homework, limited TV watching, made the child do chores around the house, let the child know they are proud of them, etc.] are less likely than those who do not use alcohol, tobacco, or illicit drugs.”¹⁰ This research also indicates that perceived disapproval and parental involvement decreases as children age.

Perceptions of Peer Disapproval-Grade

Peer disapproval is linked to the notion of “peer pressure” to use. The higher the perception of approval the more likely a youth will make the decision to use, regardless of actual use rates.
